School Story Curriculum Kit for Mathematical Concept of Area of a Rectangle

1 School Story Curriculum Card - The story of the fish

3 Hand puppets

- Fish
- Lotus
- Bee

Definition - Area of a rectangle = length * breath

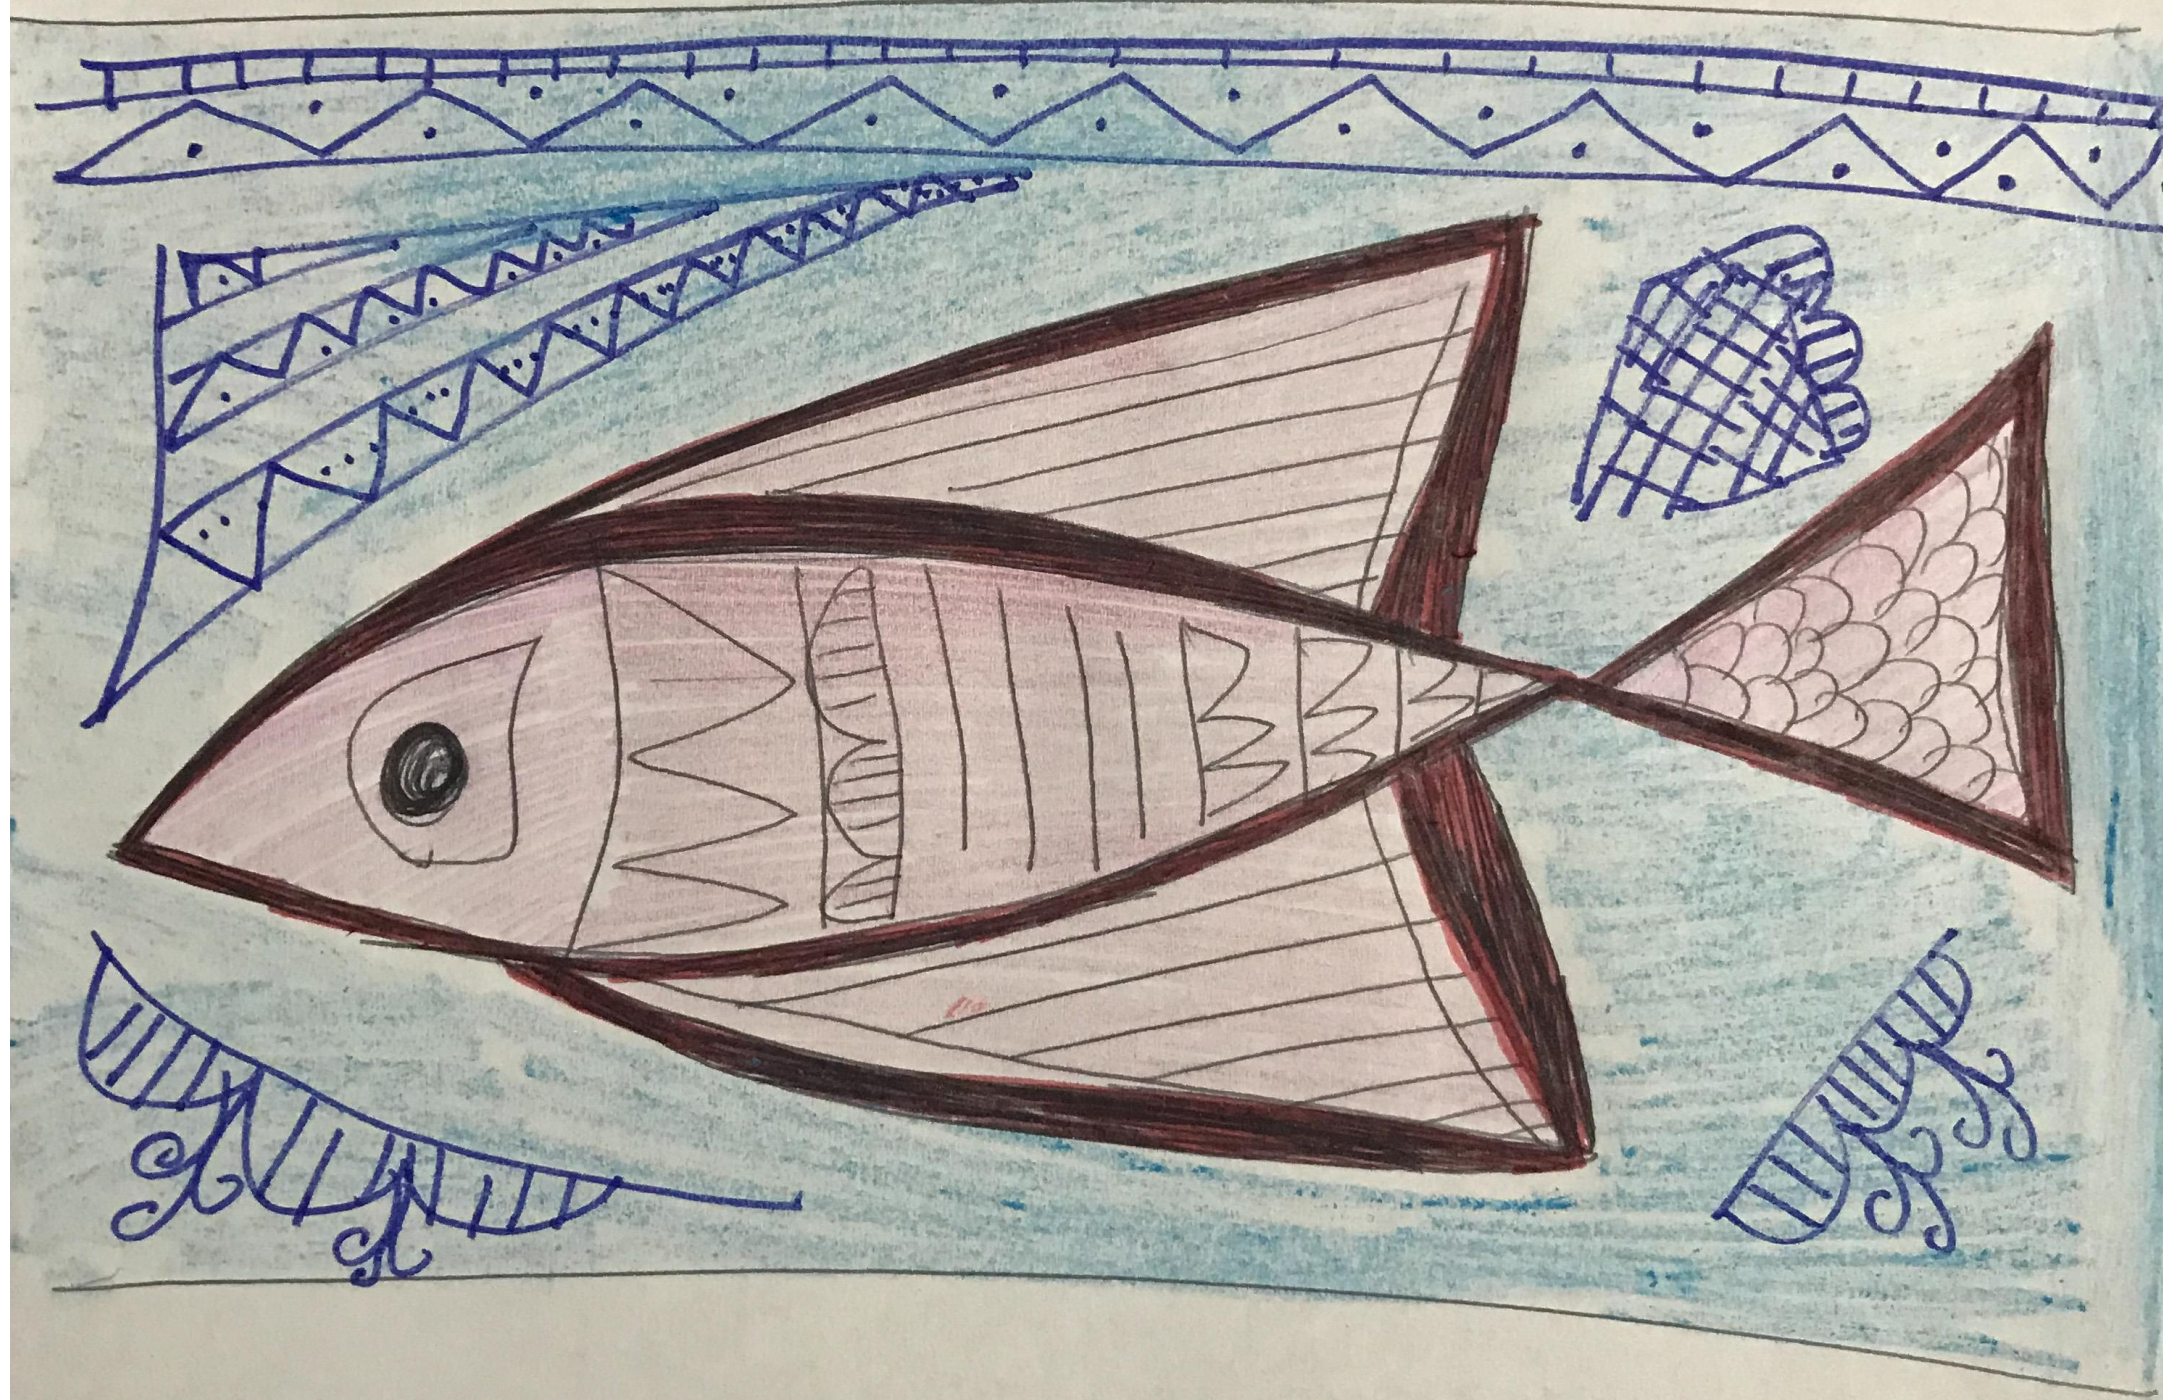

The story of the fish

Subject - Mathematics

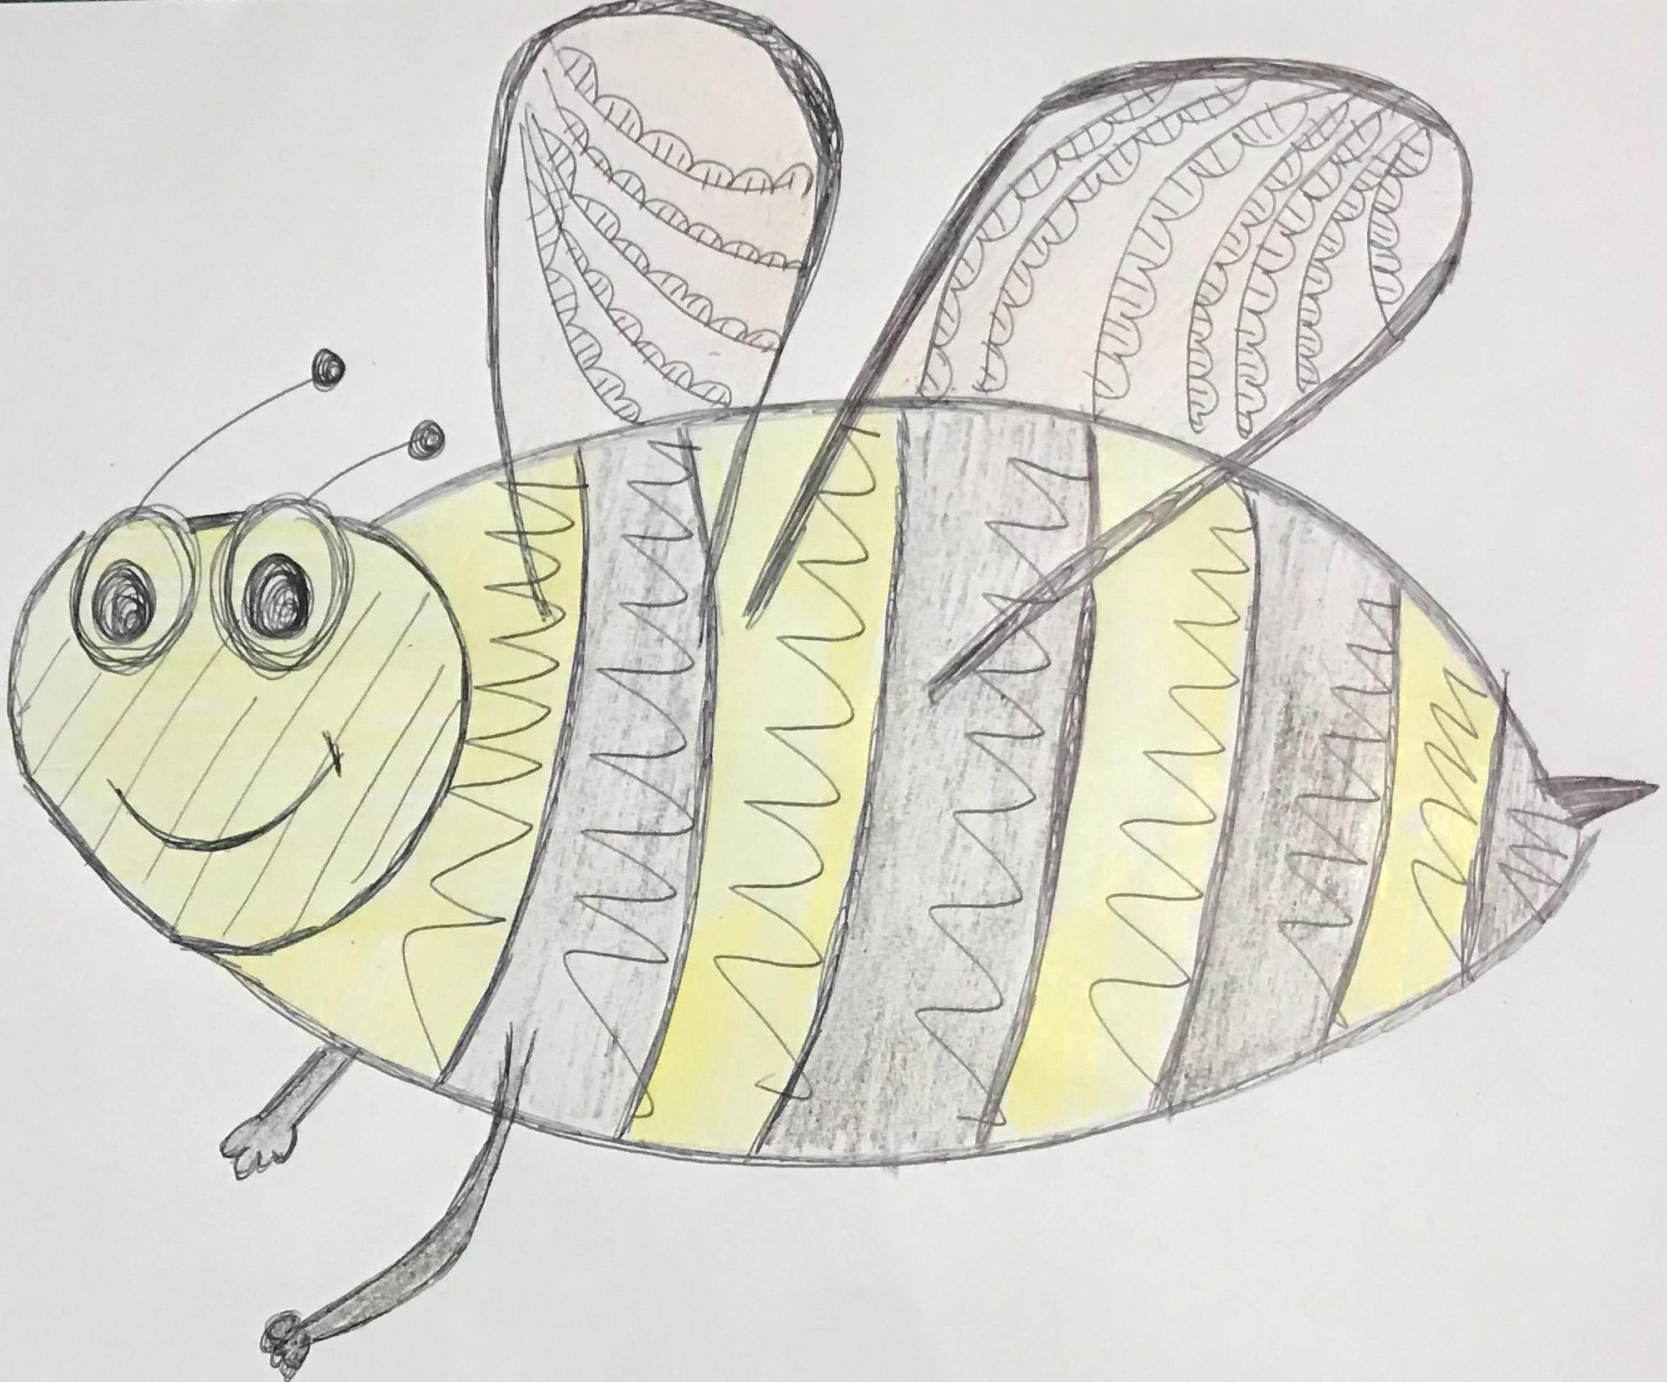

Concept - Area of a rectangle

Definition - Area of a rectangle = length * breath

Once a fish was swimming in a pool of water filled with pink lotuses. These lotuses would not fade as they were ever pink lotuses. They were magical lotuses. The magical lotuses would radiate a particular vibratory force with the mantra om hum. Bees would buzz near the lotuses. One day, a prince drew a rectangular piece of paper. The fish wanted to know the area of that rectangle. And it swam up to the lotuses for help knowing they were very wise. The lotuses said, "The longer side of the rectangle is called length and the shorter side of the rectangle is called breath. The length into breath of the rectangle is called the area of the rectangle. The bees buzzed with joy on hearing this formula. The fish swam in circles in joy.
