

School Story Curriculum

Book 1

*A resource for teachers, educators,
special educators, storytellers,
schools and children*

Storytelling is an act of narrating a fictional tale to an audience.

This performing art always involves

- The audience
- The storyteller
- The story

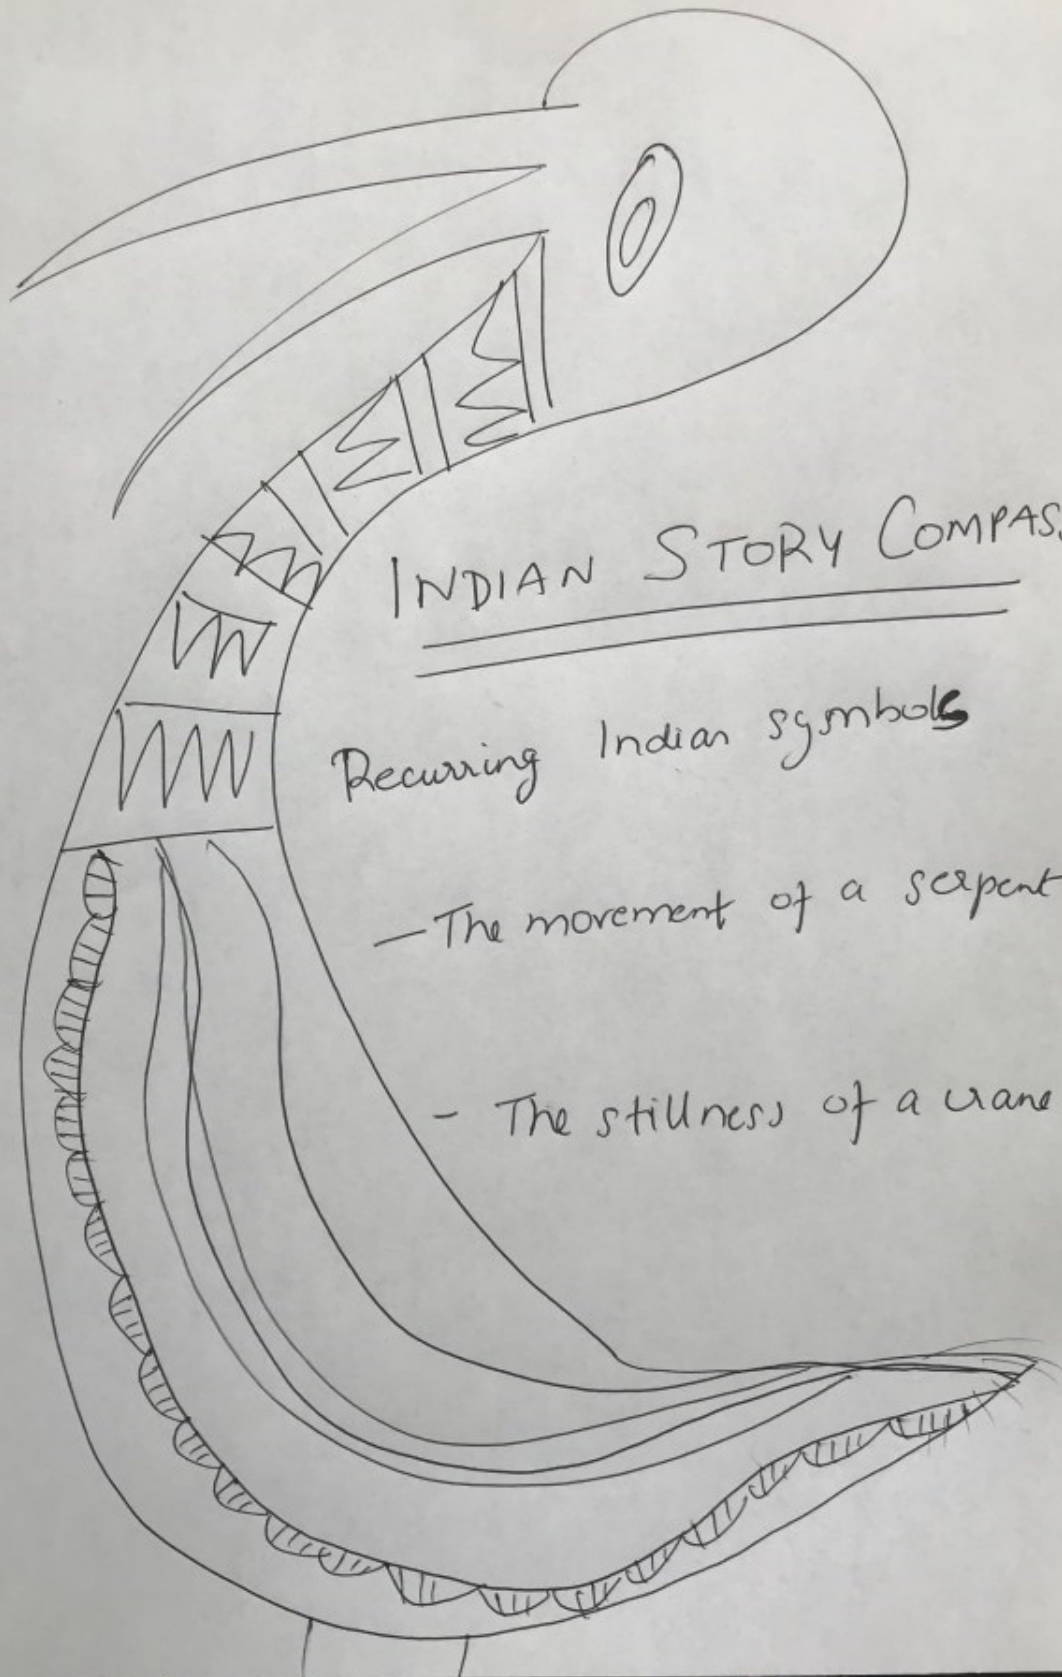

The collective memory of the folk story

Once upon a time, a story occurred, it occurred to our ancestors. It is still preserved in our ancestral folk memory and in our bones. It is also preserved in our storytelling and folktale collections. Such stories are often preserved by communities that live with nature such as adivasis.

Storytelling is an act of establishing the narrative basis of all human experience and human knowledge systems. Just as a tree is immanent in a seed, a story is capable of creating these worlds of meaning and understanding which are so related to all human beings.

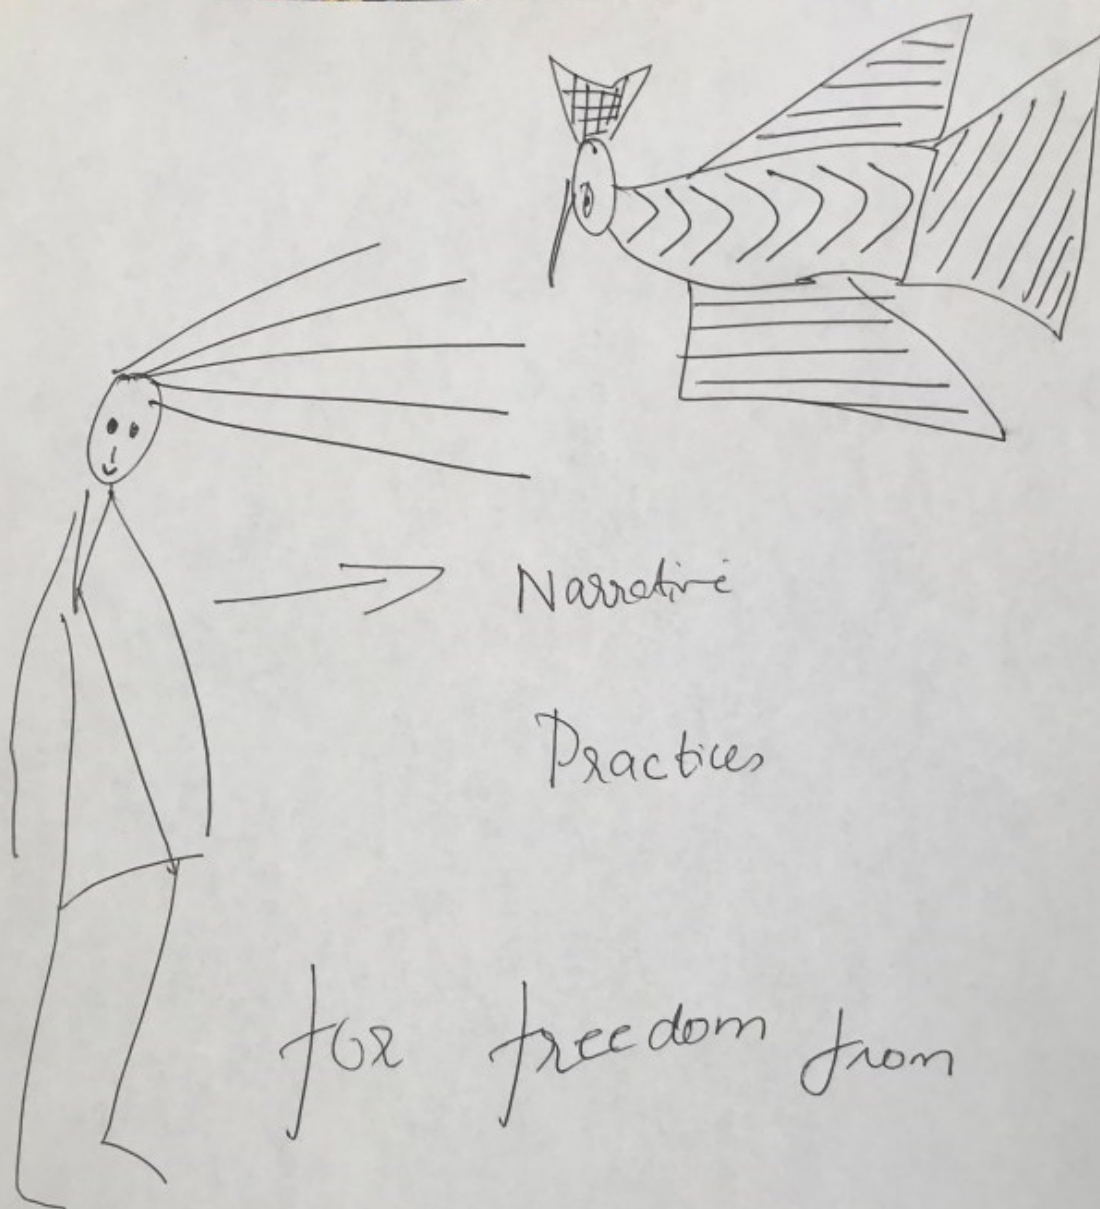

INDIAN STORY COMPASS

Recurring Indian symbols

— The movement of a serpent

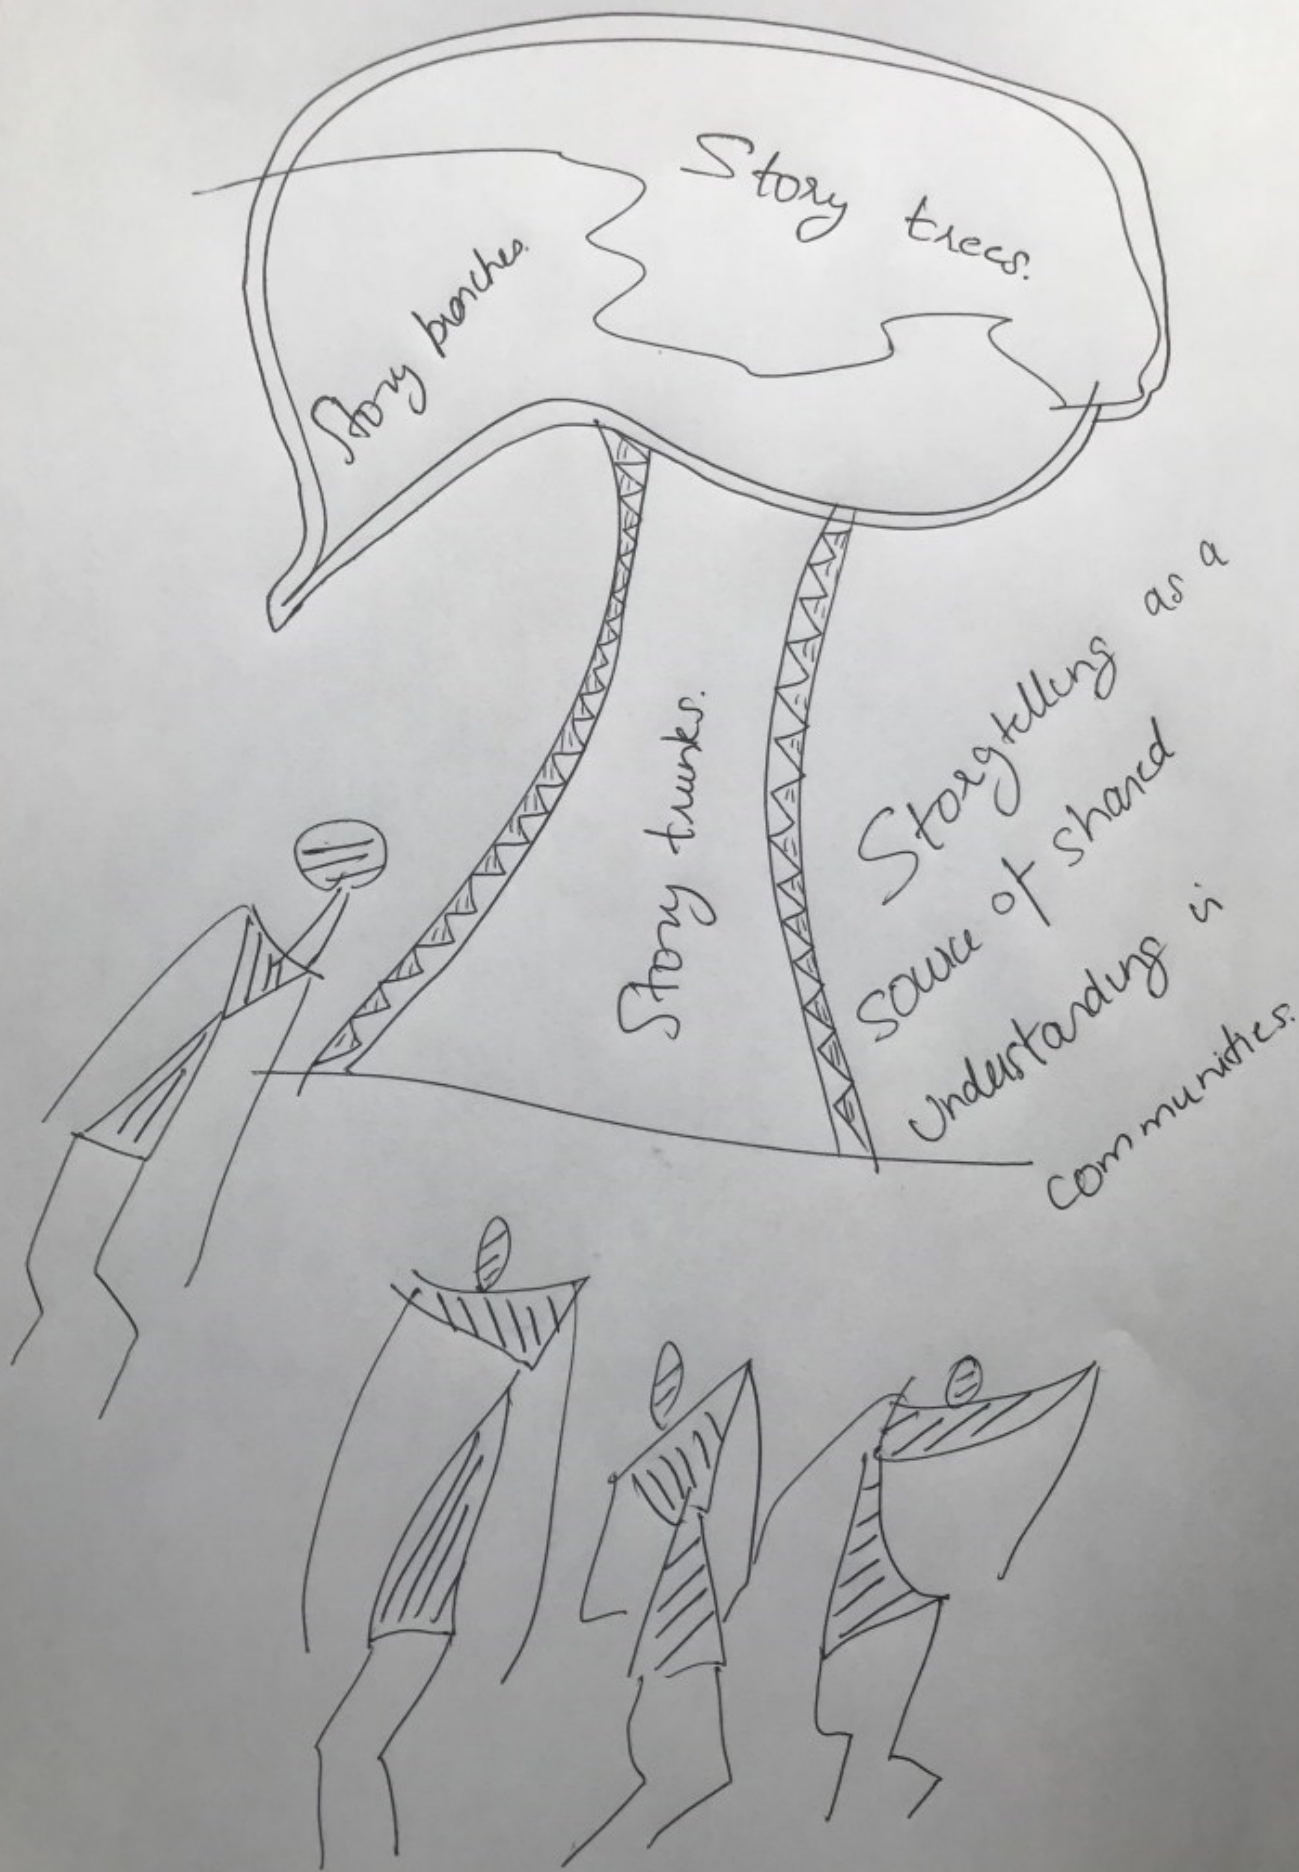

— The stillness of a crane.
